I. LUCKY NETWORK INTRODUCTION

Lucky Network is a Blockchain platform, born with the goal of optimizing the GameNFT and Metaverse experiences with outstanding features such as extremely low and adjustable Gas fee for each GameFi transaction, high processing speed and block confirmation, open platform to support smart contract launch for other projects.

Lucky Network maintains the usage of **Ethereum Virtual Machine** (EVM) to support Solidity so other existing projects could move to **Lucky Network** with minimized changes to their codebase.

Lucky Network develops an ecosystem of main areas: *AMM Dex, Wallet, Launchpad, Blockchain, DAO, stable coin* and most importantly, the **Legendary Metaverse**.

Lucky Network (LN) also allows project issuers to launch smart contracts on LN Chain and supports bridging with ecosystems like *Binance Smart Chain, Avalanche C-Chain, Solana, Ethereum,...etc*

Lucky Network uses **L99** (Lucky Unicorn Token) as the main platform coin in the entire ecosystem. In this ecosystem, **Lucky Unicorn** is a GameFi with the coin mining mechanism defined as "*Proof of Playing*", meaning that players could earn **L99** coin while playing, and that's the only way **L99** is created.

L99 while being used in **Lucky Unicorn**, can be used as platform fee for other projects that are run on LN chain, creating more usability for the **L99** coin minted. **L99** is burnt through time, eventually creating the scarcity for the **L99**.

II. GAMEFI INTRODUCTION: LUCKY UNICORN

GameFi	Lucky Unicorn
Slogan	Win your way
Token	Lucky Unicorn Token
Trading Code	L99 (Platform coin) L98 (Reward token)

Lucky Unicorn is a blockchain-based trading and fighting game that is partly owned and operated by players. Inspired by popular games like *Pokémon*, *horse racing games* and *character development games*, **Lucky Unicorn** allows players to hatch, collect, raise, battle and trade unicorns while maintain being an **On-chain GameFi**.

Players will hatch eggs or buy unicorns on the marketplace with four different rarities: Common, Uncommon, Rare and Legendary. Using the unicorn to collect **L99** is the game's basic "Play-to-Earn" mechanism. *Experience points (EXP)* are used to level up and increase the stats of the unicorn. The stronger the stats, the easier it is for the unicorn to win in *Player-versus-Player* games and earn more **L99** coin. Earnt **L99** could be staked in pool to receive **L98**, a reward token that are used to purchase items, do various stuffs inside the game ecosystem,... Each unicorn has their own age, which will define their ability to join *Play-to-Earn* event, *Player-versus-Player* games,...etc.

Real estates are an addition to the game with various characteristics that could help owners earn consumable items used in the game.

Each unicorn or *real estate* is a *non-fungible token (NFT)* with on-chain properties that are under our own standard (**Lucky Network NFT Standard**).

Lucky Unicorn is the only GameFi where players can mint **L99** coin, with the ecosystem coin under the symbol **L99**. They are used in almost the entire **Lucky Network**, such as hatching eggs, trading on Marketplace or participating in minigames, buying real estate, staking, registering to buy Private Sales, IDO other projects on the Lucky Network, platform fees, ...etc.

III. FOUNDING TEAM

Lucky Unicorn was founded by a group of Blockchain software engineers, Game Studio and some senior game developers at some famous *horse racing game* series, *Pokémon* series and *character development* games. With the experience of producing high quality games before founding **Lucky Unicorn**, along with the gaming experience of the founding team, we aim to develop a new NFT gaming ecosystem that helps users approach the world of Blockchain more easily, earn our utility coin and have fun in our universe of unicorns.

In addition, in each market, **Lucky Unicorn** implements a strategy of signing media partners in local country. Aiming to popularize and promote in the most effective way. Our mission is to bring NFT closer to the public and help people have a positive perspective about the blockchain world as it is a future technology that everyone should be aware of. The entire project is written on-chain and we are excited to have you as a player of our ecosystem.

In total, the **Lucky Unicorn** team consists of 20 full-time employees, operating and working **WORLDWIDE**. The Board-Of-Development group includes:

CEO: Mr.Otsuka - Used to run Gaming projects in Japan, more than 10 years of experience in the investment field, Japanese.

CTO: Benjamin Tang - Over 8 years of experience training Blockchain engineers and software manufacturers, currently based in Singapore.

CMO: Pauline - Over 7 years of experience of MARCOM in the Blockchain field, French-Japanese.

Real identities of members and chiefs are kept secret due to strict law enforcements on GameFi in most of the countries that we are current located.

IV. “PROOF OF PLAYING” MECHANISM OF LUCKY UNICORN GAMEFI.

Method 1: Minting **L99** through raising and training unicorns.

Each unicorn possesses 6 different ability indicators including: *health, speed, recovery, strength, mana and grass hunting performance*. In the process of raising unicorns and taking them to battle, as the player levels up, the player also increases the unicorn's ability stats. This provides a fundamental diversity among unicorns, with most of the newly hatched unicorns having basic stats, while those with the strongest combination of skills and gears, levelling up can have amazing stats. With that fact, there is no unicorn that having the same stats as other unicorns.

An excellent unicorn in addition to its beauty, unique skills, will be able to challenge with different opponents on our *Player-versus-Player* system or participate in *Play-to-Earn* and start earning **L99** coins.

Unlike other blockchain-based fighting and character development games, the number of unicorns born has a balanced control over the entire ecosystem. The unicorn population control policy will preserve **L99** coins and unicorns are preserved and grow in value.

Unicorns need grass to eat in order to maintain their fighting power. Grass can be obtained through playing **Grass Hunting**. Grass can still be used to sell and collect **L99** coins. If you do not want to hatch eggs and raise ponies, you can visit the unicorn marketplace to choose your favourite unicorns from other players and start playing right away!

Method 2: Minting **L99** through real estate ownership and exploitation

Each real estate in the **Legendary Metaverse** has different usage and minting **L99** is one of its usage.

Property owners can harvest and sell on *Marketplace* to earn **L99** or other tokens on the **Lucky Network** platform.

V. LUCKY UNICORN TOKEN (L99)

Lucky Unicorn Token (L99) has a total supply of 1 billion coins allocated to other parts of the game, as shown in the diagram below.

The founding team will lock 14% of their coins in a linear release contract. Those coins can be unlocked completely when listing **L99** on a reputation CEX such as *Houbi* or *Binance*.

The amount of **L99** obtained from the mechanism of "**Grass Hunting**" **Market Fee**, **Lucky Network to Binance Smart Chain Bridge** will be used to establish the **Burning & Staking Fund**, a small percentage of that amount will be used to compensate for our development fee. **L99**'s financial management department will flexibly use this fund for burning to create scarcity or pay interest for the group of holders. In addition, **L99** can be used for staking or farming out internal tokens in the game, such as L98 or NFTs, etc. This mechanism helps the *Total Value Locked (TVL)* of **L99** increases, reducing inflation.

Token Name: L99	Liquidity (20%) Unlock 100% when listing on DEX	Marketing - Event (10%)
Total Supply: 1,000,000,000 L99	Public on CEX (12%)	Dev + Team (20%) Lock 14% until listing on CEX
Play to Earn (30%)	Private (5%) Unlock 50% Unlock 50% after Stage 2	Advisor (3%) Unlock 50% Unlock 50% after Stage 2

VI. SECURITY AND TRANSPARENCY

All of our contracts is launched on the decentralized blockchain platform operated by *Binance* (World's Top 1 cryptocurrency exchange) called the **Binance Smart Chain** (BSC) and our private blockchain - the **Lucky Network** (LN Chain). Therefore, it is secured, decentralized and most importantly the outcome of the the game process cannot be interfered with. We ensure that the entire **Lucky Unicorn** is operated 100% on-chain and under no circumstances that the game is controlled by any party.

Lucky Network consists of machines that are placed around the world. People are encouraged to participate in keeping a backup of **Lucky Network** at their own machines.

Smart contracts are publicly trackable on **Lucky Network** and BSC Scan, which enables tracking transactions and activity records. As a result, it is transparent to everyone in the world. We also ask other experts to help audit the contracts for **Lucky Unicorn** team to increase visibility and decrease the chance of bugs occurring in the final production game. In fact, during our production run of over 6 months, we **HAVE NOT BEEN HACKED** by any parties.

Lucky Wallet (LucLet), *MetaMask* and other trusted cryptocurrency wallets are suggested to use with our game. Tokens & coins can then be withdrawn directly into user's wallet. Please take measures to protect your wallet as guided by those following application, **Lucky Unicorn & Lucky Network** does not save any private information related to your wallet seed phrase, private key, your private personal information,...etc.

VII. THE DEVELOPMENT STAGES OF LUCKY UNICORN
